
Name

rdairplay — Module for playing Rivendell logs

Synopsis

```
rdairplay [log-spec=[:next-line [+]]]
```

Description

Where *log-spec* refers to one of the three log machines (**--log1**, **--log2** or **--log3**, referring to the Main Log, Aux 1 Log, Aux 2 Log log machines, respectively) and *nextline* to the line number to do a 'make next' to after the log is loaded (default = 0). If the + is appended, then the log is started after the 'make next'.

Examples

```
rdairplay --log1=MyLog      Load MyLog into the Main Log machine

rdairplay --log2=MyLog:14+  Load MyLog into the Aux Log 1 machine, 'Make Next' to line 14
                             and then start the log.

rdairplay --log1=YourLog    Load YourLog into the Main Log machine and MyLog into the
--log2=MyLog                Aux Log 1 machine.
```
