Namespace Declaration .....	1
Fields .....	1
Example .....	1

## Overview

The "superfeed" XML namespace adds support for additional fields used by Rivendell Superfeed RSS podcasting functionality.

## Namespace Declaration

The namespace declaration is:

```
xmlns:superfeed="http://www.rivendellaudio.org/dtds/superfeed-0.1.dtd"
```

## Fields

The namespace adds the following fields:

<channelTitle>	The value of the <title> field from the <channel> section of the underlying elemental feed.
<channelDescription>	The value of the <description> field from the <channel> section of the underlying elemental feed.

## Example

The following example posits the existence of two elemental feeds, AIRPLAY, CARTSLTS and LIBRARY; each containing a single post. A superfeed, called RIVENDEL and consisting of those three elemental fields would look like this:

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<rss version="2.0" xmlns:itunes="http://www.itunes.com/dtds/podcast-1.0.dtd" xmlns:content="http://purl.org/rss/1.0/mod
```

```
